

The following test patients and encounters have been created to test eICR creation, generation of a reportability response and return of the reportability response to the sending system. As part of the testing scenarios, eICR's will be submitted to the AIMS Platform, validated, processed by the Reportable Condition Knowledge Management System (RCKMS), reportability responses will be generated and responses sent back to the sending system.

The provider and patient locations have been chosen to invoke specific jurisdictional authoring rules so it is important to enter the information as represented below. Using a different patient or provider address may result in an expected "No Rule Met" reportability determination in the reportability response.

All of the test scenarios result in a reportable condition with the exception of the Lab Order scenario which will return "No Rule Met"

1 Problem List, active

- On May 13th, 2020, a 17 year old Asian female, Kari Kidd, comes to the doctor at an outpatient clinic with her mother
- Birth date is October 27, 2002
- Race -- Asian
- Patient Ethnicity -- Not Hispanic or Latino
